

General:

Das Agent is used to control your DiaScan S+9 and to configure your personal preferences. After Installing Das, a new icon will be added to your taskbar:

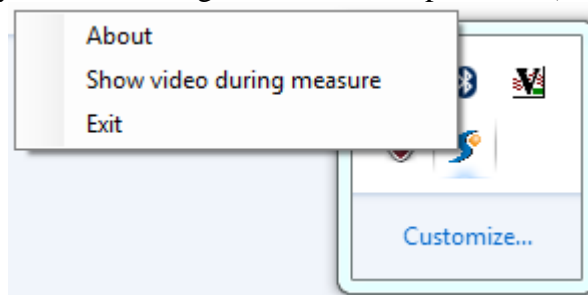

Das Agent Operation:

To access the Das Agent options menu, right-click on the Das Agent Icon:

Note: during measurement only some of the right click menu is presented (About, Show video, exit):

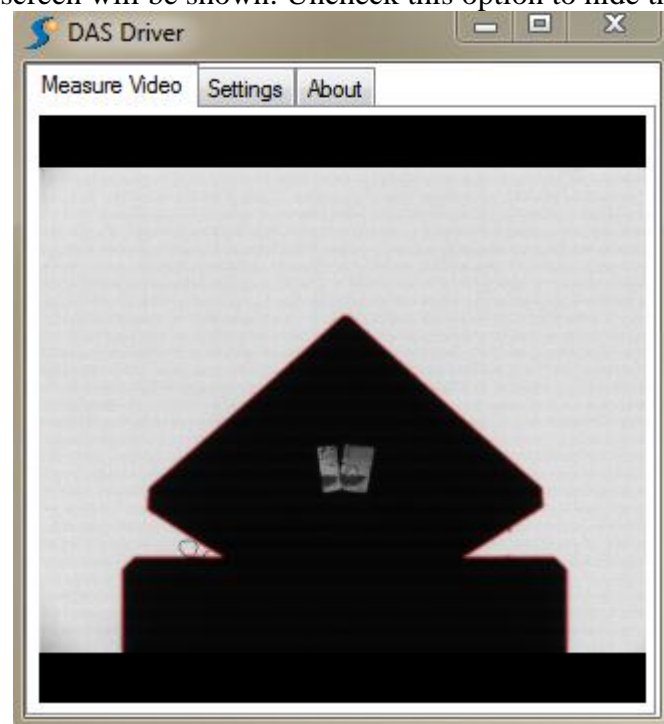

About: will present your version number of Das Agent:

Stop Agent: stops the agent from working (it will remain running but it will not control the machine), once stopped it can then be restarted (Stop button will change to Start)

Preform light calibration: choose this option to preform light calibration

Show video during measure: use this option to view the stone **during measurement**, if the machine is not on measuring state, a black screen will be shown. Uncheck this option to hide the video.

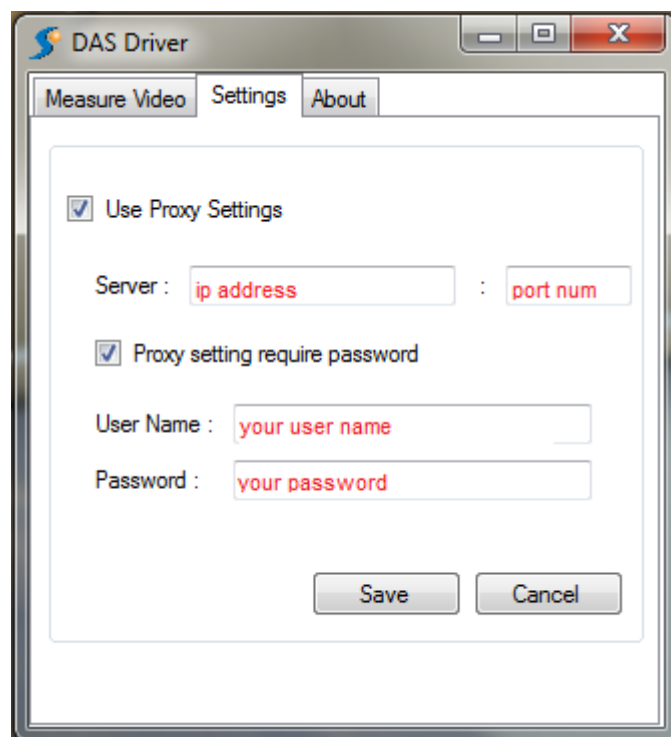

Check for updates:

Choose this option to automatically check for updates, if a newer version of Das Agent is available, an update will be downloaded to your computer and then installed, your older version of Das Agent will be replaced with the newest version.

Settings:

if your computer is connected to the internet through a proxy server, you will have to manually add your proxy ip address & port number, if your proxy server requires authentication you will also have to add your user name and password.

Exit:

Choose this option to Exit Das Agent

Note: once quitting Das Agent the computer will not be able to communicate with the machine, Thus, measuring a stone will not be possible.

***Report on error:**

This option is available only after an error has occurred, e.g.: measuring was not successful

Choose this option to send a report to our Support team; this report will help us analyze the problem and suggest a proper solution.
